Mid-Term

Shaoquan Jiang posted on Jun 3, 2026 12:24 PM

Hi Everyone,

Our mid-term is scheduled to Friday June 26, 1 – 2pm, at 4011 (our classroom), Ouellette 300. Please prepare early. It covers the first three weeks' PPTs on Brightspace as well as your assignment. No security lectures will be included. It is MCQ based with 60 questions in 1 hour. The exam does not allow any electronic device including your calculator. I do not have a sample paper for you to practice. But I can still have a few sample questions below to let you feel what kinds of questions I could make.

1. What is a wireless access point used for ? [B]

- A. routing
- B. providing a wireless link
- C. providing a wired link
- D. modulation

2. In a subnet 233.1.1.0/24, how many common bits for IPs in this subnet are there? [A]

- A. 24 bits
- B. 8 bits
- C. 0
- D. 255

3. A link layer packet is called _____ [A]

- A. a frame
- B. a segment
- C. a datagram
- D. a payload

4. What information is required in the transport layer UDP demultiplexing? [A]
- A. Only dest port
 - B. source ip, dest ip, source port and dest port
 - C. source port and rest port
 - D. only source port
5. If a SYN packet has a sequence number 123, what is the sequence number of ACK packet (i.e., the reply packet for SYNACK packet) by the same sender? [B]
- A. 123
 - B. 124
 - C. 125
 - D. undetermined
6. If a link layer switch receives a frame with destination MAC not recorded in its switch forwarding table, it will _____. [C].
- A. discard the frame
 - B. forward on a single default interface
 - C. flood to all the attached interfaces except the interface where the frame comes from
 - D. use ARP to find out the interface for the destination MAC

Regards,

Shaoquan
